

UnifAI Status Report, Feature Map & Roadmap

Project: UnifAI (`unify - Copy`)
Remote: `https://github.com/THIRUPUGAL-2003/unifai\_new.git`
Branch: `main`
Document date: 10 Sep 2026
Audience: Team handoff (Thiru offline until ~15:00 IST)
Deploy refs: `https://unifai.dev-yp.com` / `https://unifaiv2.dev-yp.com`

0. Handoff note

- Thiru is **off** development until 3:00 PM IST.
- This document is the handoff pack: **what exists, what was changed, what is broken, what is next**.
- A phone call cannot be placed by the coding agent. Use this doc + chat for sync.

1. How to read this document

Symbol	Meaning
----- -----	
Enabled	Feature UI/config turned on in your environment
Working	Code path exists and basic health/wiring looks OK
Needs test	Enabled, but live QA still required
Known error	Confirmed issue / partial behaviour
Not done	Explicitly pending

2. Changes vs base (this repo)

2.1 Base

- Product base: UnifAI / Bifrost-style gateway + UI.
- This copy tracks `origin/main` on `unifai\_new`.
- Recent theme of commits: **MCP catalog/sync**, **Browser Guard**, **cmd / deploy**, **model UI fixes**.

2.2 Uncommitted changes (as of this document)

These files are modified locally and **not yet committed**:

File	Change
----- -----	
`core/mcp/credstore/shared_headers.go`	Do not send empty `Authorization` header (avoids confusing upstream 401)
`core/mcp/utls/utls.go`	Skip empty static header values on the wire

| ` transports/unifai-http/handlers/mcp.go ` | Reject `auth\_type=headers` create without any header value (clear 400) |
| ` ui/.../mcpClientForm.tsx ` | UI validation: Headers auth requires ≥1 filled header |

2.3 Major work completed in this stream (summary)

Area	What was done
MCP Library	Rebuilt curated catalog (~122 servers with logos); sync default → `file:///app/configs/mcp-library.json` (getunifai.ai DNS is dead)
MCP sync logic	Removed silent bad fallback behaviour; prune guard; resurrect soft-deleted remotes on sync; sanitize dead catalog URLs
MCP settings UI	Allow `file://` catalog URL; placeholder fixed; RBAC aligned
MCP Headers connect	Empty-header / validation hardening (see 2.2)
Auth / email (earlier)	Registration accept/reject mail; login notice for new device; lockout/reset/email uniqueness rules
MySQL support (earlier)	Driver paths + `DB\_TYPE` override (live env still Postgres)
Browser Guard	Windows installer / agent updates (v1.5.x–1.6.x line in git history)
Model catalog	Description/attributes error fixes claimed by team — **still needs re-check**

2.4 What “base vs your fork” means practically

You did **not** only toggle UI switches. You:

- 1. **Enabled** many enterprise-style modules (Observability connectors, Governance, Guardrails, Routing, MCP sub-features).
 - 2. **Repaired / rebuilt** MCP catalog after DB wipe / wrong sync source.
 - 3. **Hardened** Headers auth so empty keys fail clearly.
 - 4. **Operate** Browser AI Guard on Windows laptops; Mac + Chrome-all-sites still pending.
-

3. Feature map (inside → what it does → status)

3.1 Browser AI / UnifAI Guard (laptop)

Inside	Purpose	Status
Target websites	Sites Guard watches	**Enabled** — some sites work, some don't
Prompt interception	Capture submitted prompts	**Working** (incl. short text/numbers in Guard v1.5.7+)
Prompt logs	Audit prompts	**Needs test**
Guard Bot	Bot / policy actions	**Needs test**
Regex rules	Pattern block/allow	**Working for all sites (claimed)**
LLM classification	Smarter allow/block	**Known gap** — LLM not working; regex only
Windows installer	Employee install	**Added / OK**
Mac agent	Same on macOS	**Not done**
Chrome “all websites”	Global intercept	**Not done** (partial site list only)

Use: Employee browser traffic → UnifAI policy → log / block / allow.

3.2 Observability connectors

You enabled: **Maxim, Datadog, BigQuery, Kafka, Pub/Sub, New Relic** (+ OTEL / Prometheus in UI).

Connector	Connects to	Use	Status
----- ----- -----			
Maxim	Maxim AI observability	Trace/tags export	Enabled — needs live connect test
Datadog	Datadog	Metrics/logs/APM style export	Enabled — needs live connect test
BigQuery	GCP BigQuery	Analytics warehouse export	Enabled — needs live connect test
Kafka	Kafka cluster	Event stream export	Enabled — needs live connect test
Pub/Sub	Google Pub/Sub	Event publish	Enabled — needs live connect test
New Relic	New Relic	APM/telemetry	Enabled — needs live connect test
OpenTelemetry	OTLP collector	Traces (Headers = collector auth)	UI present — verify config
Prometheus	Prometheus / telemetry plugin	Metrics scrape	UI present — verify config

Note: “Enabled” ≠ proven healthy export. Each needs destination credentials + one successful export sample.

3.3 Models / Providers / Pricing

Feature	Use	Status
----- -----		
Circuit Breaker	Fail over when provider/header signal trips	Added — needs test
Pricing Overrides	Custom model pricing	Added — needs test
Model Settings	Sync URLs, intervals, routing depth, etc.	Added — needs test
Model providers (60+)	Upstream LLM vendors	Added — needs smoke test per critical vendors
Model catalog description / attributes	Catalog metadata display	Fixed earlier — re-check still required

3.4 MCP Gateway

Sub-feature	Use	Status
----- -----		
MCP Catalog / Library	Browse/install MCP servers (~122 + logos)	Recovered & seeded — needs install/OAuth test
Tool Groups	Group tools for access control	Enabled — needs test
Auth Sessions	Per-user OAuth/Headers sessions	Enabled — needs test
OAuth Grants	OAuth grant management	Enabled — needs test
MCP Settings	Catalog URL / sync	Fixed (file:// default) — Force Sync after deploy
Headers auth path	API-key MCP connect	Hardened (empty key blocked)
OAuth install path	Vendor login MCP connect	Expected — some servers fail without OAuth; some vendor/timeout errors remain

Known MCP issues (current):

- Some installs → **timeout / connect error**
- Some servers → **auth/OAuth incomplete**
- Some servers → **vendor endpoint strict / unavailable**
- Catalog is **not** getunifai remote anymore (domain NXDOMAIN); local JSON is source of truth

3.5 Guardrails

Inside	Use	Status
----- ----- -----		
Rules	Content/policy rules	Enabled + connected — needs regression test
Providers	Guardrail provider backends	Enabled + connected — needs regression test

3.6 Governance

Feature	Status
----- -----	
Virtual Keys	Working focus area — keep testing
Users	Working focus area — keep testing
Teams	Enabled — was erroring; re-test all flows
Business Units	Enabled — was erroring; re-test
Customers	Enabled — was erroring; re-test
User Provisioning	Enabled — was erroring; re-test
Roles & Permissions	Enabled — was erroring; re-test
Access Profiles	Enabled — was erroring; re-test
Audit Logs	Enabled — was erroring; re-test

3.7 Adaptive Routing / Dashboard / Settings (routing)

Feature	Status
----- -----	
Adaptive Routing	Fully enabled/configured — needs end-to-end request test
Dashboard	Enabled — needs metric sanity check
Routing Settings	Enabled — needs test

3.8 Prompt Repository & Skills Repository

Feature	Use	Status
----- ----- -----		
Prompt Repository	Prompt templates / playground	Present — needs test
Skills Repository	Skills metadata/packages	Present — needs test

3.9 Settings

Section	Notes	Status
----- ----- -----		
Client Settings	Header forwarding, client behaviour	**Needs test**
Compatibility	Compat layer	**Needs test**
Caching	Cache behaviour	**Needs test**
Security	CORS / required headers	**Needs test**
API Keys	Platform keys	**Needs test**
Performance Tuning	Limits / tuning	**Needs test**
Feature Flags	Feature toggles	**Needs test**
Vector DB	Error removed (per your note)	**Removed/cleaned — confirm UI no longer errors**

3.10 Auth / Login / Email / Guard on laptop

Item	Status
----- -----	
Full login flows	**Implemented — needs full QA**
Create account	**Implemented**
Accept / Reject registration + email	**Implemented earlier**
Mail options	**Enabled — verify SMTP in env**
Laptop Guard installed	**Done on Windows path**

4. Headers cheat-sheet (where they connect)

UI Headers	Connects to	Affects “Connected”?
----- ----- -----		
MCP Headers	Upstream MCP server	**Yes**
MCP Per-user Headers	Upstream MCP (per user)	**Yes (tools)**
MCP Gateway auth mode Headers	Client → UnifAI `/mcp`	**Yes (gateway)**
Provider Extra Headers	LLM provider	No badge; call success/fail
Provider Beta Headers	Anthropic betas	No
OTEL Headers	Trace collector	No
Security / Logging / Routing Headers	Policy / logs / routing	No

5. Known errors / gaps (priority)

P0 — user-visible broken / incomplete

1. **Browser AI LLM path not working** — only regex works across sites.
2. **Chrome all-websites coverage not done.**
3. **Mac Guard not developed yet.**
4. **MCP:** intermittent server/timeout/auth failures on install/connect.
5. **Governance modules** (Teams → Audit Logs except VK/Users): historically errored — full working-condition pass required.

P1 — enabled but not proven

6. Observability connectors (Maxim, Datadog, BigQuery, Kafka, Pub/Sub, New Relic) — enabled, need live export proof.
7. Circuit Breaker / Pricing Overrides / Model Settings / 60+ providers — smoke tests.
8. Adaptive Routing / Dashboard — request path proof.
9. Model catalog description/attributes — re-verify after prior fix.
10. MCP Tool Groups / Auth Sessions / OAuth Grants / MCP Settings — functional QA.

P2 — polish / ops

11. Commit + deploy uncommitted Headers hardening.
12. Document SMTP + OAuth callback URLs per environment.
13. PDF/DOC distribution to stakeholders.

6. Roadmap

Done / largely done

- [x] Core UnifAI gateway + UI
- [x] Browser Guard Windows packaging
- [x] Observability connector UIs enabled
- [x] Models: Circuit Breaker, Pricing Overrides, Model Settings, many providers
- [x] MCP Library recovery (~122 + logos) + sync URL fix
- [x] MCP Headers empty-key hardening
- [x] Guardrails Rules + Providers enabled
- [x] Governance modules enabled (VK/Users trusted more than others)
- [x] Adaptive Routing / Dashboard enabled
- [x] Login + registration decision emails + laptop Guard
- [x] Vector DB settings error cleanup (per team)

Next (recommended order)

1. **Deploy** latest code (incl. uncommitted Headers fixes) to `unifai.dev-yp.com`.
2. **MCP QA matrix** — 10 priority servers (OAuth + Headers samples); log failures by cause.
3. **Governance QA** — Teams, Business Units, Customers, Provisioning, Roles, Access Profiles, Audit Logs.
4. **Observability proof** — one successful event per connector.

5. ****Browser AI**** — fix LLM classification path; expand site list; design Chrome all-sites.
6. ****Mac Guard**** — port agent/installer.
7. ****Models smoke**** — top 10 providers + Circuit Breaker trip test.
8. ****Adaptive Routing e2e**** — one rule path with metrics on Dashboard.

Later

- Full Chrome extension / system-wide intercept
- Hardening CI for MCP catalog sync
- Optional remote catalog host replacement for dead getunifai.ai

7. Test checklist (copy/paste)

Browser AI

- ☐ Regex blocks on Site A / Site B
- ☐ LLM path returns decision (currently failing)
- ☐ Prompt log appears in UI
- ☐ Windows Guard install on clean PC

Observability

- ☐ Maxim receives a trace
- ☐ Datadog receives payload
- ☐ BigQuery row inserted
- ☐ Kafka message published
- ☐ Pub/Sub message published
- ☐ New Relic event visible

Models

- ☐ Circuit Breaker failover fires
- ☐ Pricing override applied on cost
- ☐ Model Settings save persists
- ☐ Catalog description/attributes render without error
- ☐ Sample chat via 3–5 critical providers

MCP

- ☐ Library shows ~122 + logos
- ☐ Force Sync succeeds from `file:///app/configs/mcp-library.json`
- ☐ OAuth install completes for GitHub/Notion (or org standards)
- ☐ Headers install with real API key connects
- ☐ Tool Groups / Sessions / Grants / Settings pages load without error

Guardrails / Governance / Routing

- ☐ Guardrail rule blocks bad content

- [] VK create/use
- [] User create/login
- [] Team / BU / Customer / Roles / Access Profile / Audit Log CRUD
- [] Adaptive route selects expected model

Settings / Auth

- [] Security required headers enforce 400
- [] Caching toggle behaviour
- [] Feature flags toggle
- [] Register → admin accept/reject email
- [] Login mail on new device only

8. Environments

Env	URL	Notes
----- ----- -----		
New / primary	`https://unifai.dev-yp.com`	Health OK when last probed
Legacy / YES PANCHI line	`https://unifaiv2.dev-yp.com`	Health OK when last probed
DB	Postgres (`Unifai_test` via `.env`)	MCP library live count was 122 after reseed

9. Modify vs new vs enabled (plain language)

Type	Examples
----- -----	
New / rebuilt by you	MCP catalog file + logos seeding; Headers empty-value guards; Guard Windows releases; many connectors enabled in ops
Modified	MCP sync defaults/settings; auth emails; model catalog metadata fixes; vector DB settings cleanup
Enabled (product already had code)	Maxim/Datadog/BigQuery/Kafka/PubSub/New Relic; Circuit Breaker; Pricing Overrides; Governance suite; Adaptive Routing; Guardrails; MCP Tool Groups/Sessions/Grants
Still missing	Browser AI LLM path; Chrome all sites; Mac Guard; full connector/MCP/governance proof tests

10. Immediate actions after 15:00

1. Deploy / restart with latest Headers fixes.
2. Run **Section 7** checklist; mark pass/fail with screenshots.
3. Open one MCP fail + one Governance fail as tickets with exact error text.
4. Prioritize Browser AI LLM fix if Guard is customer-facing this week.

Generated for UnifAI team handoff. Update this file when checklist items flip to Pass.
